

[Dubai, 15.06.23] - NORDEK, a leading blockchain technology startup, will attend the prestigious Point Zero Forum to demonstrate its ground-breaking blockchain infrastructure for payment processing. NORDEK, with its plethora of revolutionary features, is set to revolutionize payment processing in the digital era.

NORDEK is powered by a fast and low-cost EVM-compatible network blockchain. NORDEK Blockchain is a Dpos Blockchain designed specifically for payment solutions, with a focus on payments, gaming, and metaverse modules.

NORDEK's blockchain network enables transactions to be confirmed in seconds rather than minutes. This speed enables frictionless and near-instantaneous payments, improving the entire user experience and allowing real-time transaction settlement. One of the biggest advantages of the blockchain is that it does away with the need for gas fees, which are typical in many blockchain networks. This streamlines and reduces the cost of the payment process, helping businesses and increasing the accessibility of blockchain-based payments for people and small-scale transactions.

NORDEK's blockchain infrastructure is designed to handle high transaction volumes without compromising speed or security. This scalability is crucial for payment processing systems that often need to accommodate a large number of concurrent transactions.

The infrastructure supports smart contracts, enabling the automation of payment processes and the creation of programmable money. This capability automates complex payment workflows and reduces manual intervention.

NORDEK's consensus algorithm and decentralized nature provide a high level of security for payment transactions. The infrastructure is designed to be interoperable with other networks and platforms. This allows for seamless integration with existing payment systems, expanding the reach and utility of NORDEK's blockchain for payment processing.

NORDEK is also launching its crypto credit card soon to bring crypto utility for the next billion people. The presale for the card has already been started.

"We are thrilled to attend the Point Zero Forum and showcase NORDEK's revolutionary blockchain infrastructure for payments processing," stated NORDEK's VP of APAC Sonny Mohanty. "NORDEK is a game changer in the industry due to our innovative features such as fast transactions, reduced carbon footprint, zero gas fees, scalability, smart contract capabilities, enhanced security, and interoperability."

Protocols using NORDEK streamline their payment operations, cut expenses, and give users a smooth payment experience. NORDEK is poised to revolutionize the future of payment processing with its environmentally friendly approach and cutting-edge technologies.

Learn more about NORDEK's breakthrough blockchain technology for payment processing at the Point Zero Forum exhibit from the 26th-28th of June at The Circle Convention Center at Zurich Airport, Switzerland.

About NORDEK

NORDEK is a lightspeed blockchain ecosystem for payments and gaming revolutionizing the sustainable adoption of decentralized technologies. By integrating decentralization, scalability, and security, NORDEK empowers developers to create payments and GameFi dApps that are forward-compatible with the future of finance.
